

Dr Ambedkar Centre of Excellence, Central University of Gujarat organized an educational tour for the students of the centre. The Nodal Officer Prof Rajesh Makwana, Members of Advisor committee Prof Jayendra Amin and Dr Vipul Solanki, Vyom Sidhpura as supporting staff and 48 students joined the tour at an ecological site Ratanmahal on 10-11 August 2023.

The first place of visit was the Balasinor Dinosaur Fossil Park and Museum. This is famous site that charts millions of years of history of existence. The research evidence found in the park shows that this land was a habitat for the dinosaurs. The students also visited the museum there and learned about the process of evolution and various phases of the progression of life on earth. The students also watched a 5D movie which introduced them to the life of dinosaurs inside out.

The students were educated about the nature and its preservation. The purpose of the visit was to make the students aware about the harm done to the nature by plastic pollution. All the tour members and the students specifically collected the plastic trash like used plastic bottles, polythene bags, thrown-away footwear etc. lying on the walking track. The bags of the trash were brought to the camp site for its proper disposal. The students were sensitized about careless use of plastic and its harm to nature.
